

COUNTING THE COSTS

Accident Statistics 2001

The 2001 Firework Accident Statistics

The total number of people treated at hospital accident and emergency departments in Great Britain during the 2001 autumn fireworks season was 1362, an increase of 40% on last year's total of 972. This increase is disappointing and, consequently, the Department of Trade and Industry is redoubling its efforts with the 2002 safety campaign.

The DTI is working to ensure the key messages are communicated to those most likely to misuse fireworks and at risk from accidents. That means getting the safety message across to 11-17 year olds, particularly boys, where we saw an increase of over 55% in injuries over the previous year. Much of the misuse of fireworks in 2001 was also the result of anti-social behaviour – incidents in the street were up nearly 60% on the previous year.

for teenagers who fool with fireworks. These will be supported by an outdoor poster campaign in the 12 areas with the highest numbers of injuries last year.

We are also working with our partners at the Child Accident Prevention Trust to tackle the problem of injuries to under fives. Last year saw an increase in the number of accidents involving sparklers, the fireworks most likely to affect this age group, from 104 to 136.

The 2001 Firework Accident Statistics in Detail

The main statistics, including a breakdown by region and individual NHS trust, are set out in the following pages.

2002 Campaign

In addition to the established tool kit and schools packs, DTI has produced two television adverts that warn of the possible consequences

Fireworks are explosives
